Sushi, a Japanese delicacy, consists of cooked vinegared rice combined with ingredients such as raw seafood, vegetables and sometimes tropical fruits.

The original type of sushi, known today as Nare-zushi - fermented fish wrapped in sour rice, originated somewhere around the Mekong River before spreading into China and later Japan.

The modern-day concept of sushi was invented in Japan by Hanaya Yohei sometime around the end of the Edo period in the mid 1800s.

The main ingredients of traditional Japanese sushi, raw fish and rice, are naturally low in fat, high in protein, carbohydrates (the rice only), vitamins, and minerals, as are gari and nori.

“ Turn the piece upside down and put it in your mouth so the fish hits your tongue first. The fish is the star and it needs to be the first thing that your palate experiences. ”
